No. 42

## Edmonton Public School.

Edmonton holds a leading position in the far west as a commercial, industrial, agricultural, and official centre. But possibly it has no greater claim to prestige in any department of life than as an educational centre. Edmonton claims to-day the finest public school building west of the Great Lakes; a fact and architect's description of which appears herewith. It is not on the school building, however, that it rests its claim. Last year Edmonton had more candidates for teacher's certificates writing at the mid-summer examinations than any other school in the Territories, except Regina and a larger percentage of pupils passed than from any other. This is a great record especially when it is remembered that Strathcona, just across the river, came next to Edmonton in number of pupils and in percentage passed. The Edmonton public school building is the

meeting of a growing and pressing demand in a creditable manner.

Edmonton was the first place in the Territories to organize a public school. This was done before land was surveyed or taxes could be levied. Steps were taken in the fall of 1881, and by Jan. 1st 1882, the first Edmonton school building was ready for occupation. It has been used continuously since until the first of the present year. The first board of trustees were M. McQuay, M. Grant and J. Norris. J. G. Oliver and Jax McDonald were the contractors. The school was opened on Jan. 3rd, 1882. The attendance for the first two weeks was from 25 to 32. The lots on which the building stood were presented by the Hudson's Bay Co.

The original building had two additions made to it, as the population grew. Then a handsome four roomed brick building was erected on College avenue—a beautiful situation. This

building is now occupied by the high school. The population rapidly outgrew the accommodation of the seven rooms then provided, and for some years a shift was made by sending ward school rooms. At last in 1901, it was decided to meet present necessities and provide for future requirements by erecting a building that would be an ornament to the town and a suitable indication of the interest taken by the ratepayers in the cause of education. The present handsome ten-room building is the result. The grounds occupy the block which has McEwen street on the north, West, Queen street on the east, Isabella street on the south and Lynde on the north. The trustees who started the project were: Alex. Taylor, chairman; Thos. Bellamy, K. A. McLeod, M. McQuay, H. G. Taylor, and three now in office at its first occupation are: Alex. Taylor, chairman; H. G. Taylor, K. A. McLeod, H. D. Johnson, Rev. H. A. Gray. W. Ramsey is principal.

halls, etc. The air is delivered through copper gratings placed in these ducts at about seven feet from the floor, of class rooms, etc. The operation is as follows: In connection with each furnace of which there are five is a fresh air gathering room or brick built up to the outside wall of the building. The air is admitted into these chambers directly from the outside by windows raised more or less as required. The fresh cold air entering the chamber is conveyed to the different furnaces where it is warmed and delivered to the class rooms, etc. The ventilated or impure air is taken out of the rooms at the floor and drawn through four air ducts to the coal air gathering rooms in the basement, thence to the four air brick stacks and out above the roof. In arranging for the inflow of air there is a device for controlling or shutting off the supply of warm or cold air. This device consists of what is technically called mixing dampers placed at the bottom of the ducts that the teacher by operating a chain in the room can regulate the amount of warm or cold air entering the room. This system is self-regulating; that is by the teacher drawing out or closing the chain operated the indicator placed on the furnace. As this is raised or lowered, the caretaker can see at a glance whether the room requires more or less heat and can thus regulate the furnace accordingly. As a result of tests made at the school by the heating engineers it was found that the air of the building throughout could be changed four times per hour without any perceptible difference in the temperature of the rooms.

We are informed by the engineers that this is one of the most satisfactory heated and ventilated schools in Canada using the warm air circulation system. Other rooms completed and "round" systems require fans operated by power to force the warm air through the different ducts into rooms. One of the principal reasons for the successful working of the system the engineers say is because the school is so planned that every opportunity is given for the circulation of air.

The school as completed is a credit to Edmonton. Parties from the east have expressed their surprise that the town has had the public spirit to erect so handsome, durable and convenient a school building that would do credit to the large towns of eastern Canada.

When the fact is taken into consideration that the cost of first class building materials is limited, expensive terra cotta and hardwood linings being an unknown quantity here, and the fact that the building is a matter of 200 miles all of which advantages are within easy reach of eastern architects, it is a matter of surprise that buildings of any architectural proportions whatever can be built here at all.

The contractor for the building is Mr. Mendenhall, who has the brick work to Mr. P. Anderson and the painting and hard oil finishing to Mr. Frank Gray. The House Furnace Co. of Toronto had the contract for installing the heating and ventilating system.

## GETTING READY FOR SPRING

In order to make room for our very large spring stock we will continue our

### Special Discount Sale During February.

Some big snaps in Men's and Boy's Clothing.

Come with the crowd to the best lighted store in Edmonton. Our store is as bright at night as in day, having installed two new arc lights from the new power. No trouble to show goods.

### Description of Building.

About two years ago the trustees decided to erect a new central school to provide accommodation for the increased number of scholars attending school in rented buildings. In furtherance of this plan the trustees advertised in the local and eastern papers for competitive plans of a ten room brick school, with the result that nine sets of plans were sent in from architects in Toronto, Winnipeg, Brandon, and as well as from the local architects.

The plans finally accepted by the trustees were those prepared by H. D. Johnson, for the then firm of Edmonson & Johnson, architects, and the latter was appointed the architect and superintendent of the building of the new school.

The school is 71 feet by 101 feet two stories in height with basement, and finished in the roof. The style is modified Romanesque, the windows, etc. openings having semi-circular heads. Brick piers divide the windows and have the effect of breaking up the wall surface into panels. The basement walls are battered to the height of the main base course. This base course is 15 inches thick and continues around the building, 8 feet from the grade, forming the sill of the ground floor windows. The lower part of the southwest corner is square on plan, and 62 feet high to the roof, and contains the teacher's principal entrance and bell. Dividing the tower from the main hall is a rock faced archway having a pediment and a moulded cap. The archway of main entrance door and bellery are alternately brick and stone. The stone openings of windows are rock faced, having conventional ornament sunk in below the surface, and moulded label courses complete the illustration of these arches. On the west and east are projecting bays. The gables are finished with a deep moulded cornice, and the front gable is finished in diagonal brick and brick. A deep moulded cornice breaks the junction of walls with roof. The roof is pitched with an angle of 40 degrees and covered with shingles laid in mortar. The main roof has a large deck covered with galvanized iron.

The basement walls start on heavy concrete footings and are finished with brick facing set in cement. The exterior of walls being plastered in cement, these walls are built on a batter or slope, and average 24-in. thick. The floor is of concrete with a top dressing of cement. The ceilings

also being plastered. The floor space is arranged for play rooms, fresh air, and exhaust chambers, furnaces, etc. Two flights of stairs for boys and girls lead from the basement to the ground floor, and there is also a rear entrance, and the windows being placed above the ground level the basement is well lighted.

The ground floor is planned for five class rooms, four of them having a floor space 22x30 feet and one 30x30 feet, each room having separate cloak rooms five feet wide. A teacher's room is also provided in the tower. The main or teachers' entrance is on the south or principal elevation opening into a vestibule cut off from the main hall by swinging doors. The hall is 14 feet wide, on either side of which are the class and cloak rooms opening into it. At the rear of the main hall, corridors lead to the two side entrances, one for boys and the other for girls. Two flights of stairs 5 feet wide with easy rise, and rest platforms, lead to the floor above, for the use of boys and girls respectively.

First floor. This is a duplicate of the ground floor so far as relates to the size and arrangements of the class and cloak rooms. These rooms also open into a large well lighted hall, the size of the one on the ground floor. The principal room is in the tower. A flight of stairs leads from this floor to the assembly hall, and caretaker's rooms above. The height of the ground and first floor ceilings is 12 feet 6 inches. The second floor, space to which is by the staircase previously mentioned is arranged for an assembly hall and caretaker's rooms. To the right of the landing is the assembly hall having a floor space of about 3,000 superficial feet, and lighted by a large lantern light in the roof and by large windows. The balance of this floor is divided off into caretaker's rooms, and also lighted by gables, and dormer windows in roof.

The roof is carried over the assembly hall by framed trusses supported on piers resting directly on the brick bearing partition walls carried up from the basement to this floor. Access is obtained to the bellery from a room off the assembly hall. Sliding doors shut off the hall from the main hall. Inside finish. The walls throughout with the exception of the basement are plastered, hard finished, rough finish. The ceiling have plating of paper hard

finish. The joiners work is of B. C. cedar and fir and the floors B. C. edge grain fir. The class and cloak rooms, halls and stair cases are wainscotted with reeded ceiling finished with heavy moulded, capping. The doors and window finish have moulded casings and moldings, in character with the rest of the finish. The doors are large and heavy.

Slate blackboards are placed on the walls at the back of the teacher's desks, the side walls having composition blackboards. All the windows are double hung, glazed with double thick glass. The stairs have turned balusters, heavy hand rails and pannelled strings and the soffits of stairs are sheathed with reeded ceiling. The joiners work is left the natural color of the wood and finished with hard oil finish rubbed down to a dull smooth gloss.

Hardware throughout is old copper finish including all locks, hinges, etc. Heating and ventilation. The heating and ventilating system is one commonly known as the Mead-Bowd system with important modifications and improvements and like a hot water plant the principle by which it is governed is gravitation. Its construction and working may be briefly described as follows: Brick air ducts are built up from the basement and grouped together. These are the channels or ducts to convey the pure warm air to the different class rooms.

**TERRIBLE RAILWAY ACCIDENT.**  
 A train at Newark, N.J., crashed into an electric car yesterday, killing children, many of whom were killed.

**G. T. R. ACCIDENT NEAR WHITBY.**  
 A G. T. R. express train went off a steep embankment near Whitby, Ont., and several passengers were injured.

**BOUNDARY ARBITRATOR SUGGESTED.**  
 A British Columbia paper suggests the name of Mr. E. E. Dyer, K. C., as one of the Canadian arbitrators on the Alaskan boundary treaty.

**CUTTING THE LOOP.**  
 It is said the C. P. R. will construct a short line from Dexter to Nepona, Ont., avoiding the loop running to Fort William and Port Arthur.

**LOCAL.**  
 A. E. Cross, of the Calgary Brewery, is in town today.

Mr. Webster of the woollen mills returned from a trip to Ontario, Wednesday.

Frank Oliver, M. P., returned on Thursday from Innisfail, where he had addressed a public meeting on Wednesday evening.

Mr. Johnson returned from a visit to Calgary yesterday, accompanied by his brother, who will join him at partner in the plastics business here.

Dr. Galloway and Dr. Stewart, of Calgary, arrived in Edmonton last night. They are looking over the country and will leave for Fort Saskatchewan today.

Superintendent Niblock, of the C. P. R., accompanied by A. H. Harris, of Montreal, arrived in Edmonton last night at 8 o'clock in his private car. Mr. Niblock left town a few hours later leaving Mr. Harris, Mr. Harris is here to get certain information which the C. P. R. officials require.

At the curling rink to-night the following matches will take place: Pearson vs Osborne for the Hardy cup; Lander vs. the Hudson for the Hudson's Bay cup; MacKenzie vs. Emery for the Hudson's Bay cup; No games between local rinks took place last night on account of the matches with Wetaskiwin.

The sittings of the Supreme court at Wetaskiwin were completed yesterday, Judge Scott, Dept. Clerk, Mr. Nichol, Crown Prosecutor, McDonald and Major Belcher returning to Edmonton by last night's train. Several criminal cases were considered but the accused were either acquitted or judgment reserved.

**CUR. ING.**  
 Two rinks of curlers from Wetaskiwin came up to play friendly games with Edmonton rinks yesterday. It was decided, beforehand, that the total aggregate score should decide the match, so the games were decided in Edmonton's favor by an aggregate score of 30 to 30.

**First Game.**  
 Wetaskiwin, Edmonton.  
 Forster-Fraser.

 Wilkins-Rae.  
 Carruthers-Raymer.  
 Maybury, skip, 11-Mercer, skip, 9.

## COUNCIL MEETING.

The adjourned meeting of the council was held in the council chamber yesterday afternoon at five o'clock. There were present the mayor and Councilors Galloway, Grieson and Helmick.

The question of insuring the electric light and water power house was discussed, a new rate of 2 per cent having been offered.

Moved by Coud, Helmick-Grieson. That the fee of a 2 per cent rate be accepted under protest, on the understanding that a refund will be given if a lower rate can be obtained. Carried.

By-law No. 226 to provide for raising the sum of \$20,000 to be expended in connection with the electric lighting system of the municipality was submitted and read for its 1st and 2nd times.

The third reading was held over until next regular meeting.

Mr. Bouchier, of the Dorring Impounding Co., appeared and offered to compromise their claim against the town for the sum of \$250.

Moved by Coud, Galloway-Grieson that Mr. Bouchier's offer be accepted and a cheque issued in favor of the Dorring Co. for the sum of \$250 in full settlement of their account. Carried.

The meeting then adjourned.

Miss Addie Belcher returned on Thursday from visiting her brother at Lacombe.

A very pleasant evening was spent last night at the Baptist church, the occasion being a musical treat in honor of the ninth anniversary of the late Baptist church, Edmonton. Rev. Mr. McDonald presided. The programme consisted of vocal and instrumental music. Mrs. Bellamy read a very interesting paper on "The Ideal Church." At the conclusion of the programme the Ladies' Circle provided supper from 8 to 10:30. A most enjoyable evening was spent by all.
